Give your RouterBOARD a new home!
NOTE: Picture shown with RB433UAH, not included
Designed for RB411/433/600 Series Boards

- Universal Outdoor Enclosure
- Material – Zinc plated steel, powder coated gloss white
- 1 Piece Silicone Gasket
- All welded construction
- 2 Lockable, quick release latches with hinged lid
- Wall or Pole mounting hardware included for pipes with OD of ½" – 3" (76mm)
- Screen printed sub plate for easy circuit board installation
- Enclosure has 1 Ethernet hole (a pass-through included) with 4 Antenna positions
- Internal and External grounding locations
- Circuit Board installation hardware included
- Enclosure dimensions: 11 ½" x 7 ½" x 3" (292mm x 190mm x 76mm)
- Shipping weight: 7 lbs
- Made in the U.S.A.

A Universal Outdoor Enclosure that has holes pre-drilled in the back plate for RB411, RB433 and RB600 Series RouterBOARDS. This case is made from powder coated zinc plated steel and has a 1 piece silicone gasket to keep the weather out. It's completely all welded construction with 2 lockable quick release latches on a hinged lid so it's easy to change parts in the field without removing the mounts or cables on your tower. There is a flanged lip around the seal to make sure water that does drain on top of the box will not enter it.

There is even enough room to double stack two RouterBOARDS on top of each other if you wanted to. Unlike some of the other cases, this has plenty of room to run RF and Cat5 cable in and still leave enough room for heat dissipation.

The enclosure features 1 Ethernet Punch out hole with room for 4 keyed N male antenna pigtail connector cables. Also features external and internal grounding lugs.
