Description

PoE World 802.3af/at Ethernet PoE Extender/Repeater 10/100 Mbps.

This device extends PoE power and data for 100 meters past the standard. It allows power to be carried on Ethernet cabling with 802.3af/at, and have that power and data repeat another 100 meters. Compatible with PoE switches or passive injectors with any CAT5e, CAT6 or CAT7 Ethernet network cable.

Intended for use with 802.3af/at Compliant PoE switches and Injectors – this pass thru PoE solution maintains the remote device auto negotiation with the switch to activate power, and it uses some of that power to rebuild each data packet for error free re-transmission up to another 100 meters.

Specifications

Details

Data Speed	10/100
Input Voltage Max	Up to 57V
PoE Passthrough	802.3af or 802.3at
Internal Power Use	500mw
Operating Temperature	0°-50°C
VLAN Support	Transparent
